OMBROS

IEM MONITOR SYSTEM

Our road-ready IEM system consists of a 32-Channel Whirlwind/Jenson SPLIT RACK in combintation with a Behringer X32 rack mixer driving P-16 personal monitor mixers for IEMs and two powered monitors on stage.

- We have the system battle-tested and our setup organized to be as reliable and efficient as possible.
- We typically provide all mics/cables on the band's side of split.
- We bring a 30' stage drop snake to run stage inputs to the Split Rack, which is usually located off stage.
- The rack is hard-wired with a 15', 32 ch. trunk to patch into FOH inputs.
- IEM's are transformer isolated, with a "copper split" going to the FOH.
- 48v phantom power provided via Whirlwind power supply in split rack.
- 16-channel split is optional, with KK+OH or bus mix of each drum set.
- Midas M32/Behringer X32 scene file available upon request.
- Sometimes it's just easier to use house mics/monitors, let us know.
- We can also provide a full FOH PA and Light Truss - call for quote.
